The decision of which satellite phone to purchase is an important one, given the circumstances and locations where they are used. Iridium is the leading satellite phone provider with over 10 years of experience and more than 250,000 satellite phone subscribers. Iridium is the only satellite network provider to offer 66 low-earth satellites providing the earth's only truly global network and superior reliability. Please consider these questions when evaluating satellite phones to help understand Iridium's advantages.

QUESTION	NO	YES	IRIDIUM ADVANTAGE
1) Do you prefer that your satellite phone be capable of readily receiving inbound calls?			The Iridium 9555 satellite phone continues to search for incoming calls, even when the antenna is retracted. Iridium's network is the closest commercial satellite network to earth and also uses higher-power ring notifications to provide superior incoming call reliability.
2) Do you prefer that the phone have the capability to communicate with another satellite phone?			Iridium satellite phones offer superior incoming call reliability and also attractive Iridium to Iridium calling rates.
3) Would you prefer a satellite phone capable of worldwide use in the event that you needed to travel and communicate in an unplanned area?			Iridium satellite phones are the only phones that connect to Iridium's truly global network of 66 satellites that cover the entire earth's surface.
4) Can you anticipate a set of circumstances under which it would be important to power on the satellite phone and make a call in the shortest possible length of time?			Iridium's satellite phones offer the fastest power-up and call connect performance with connections in under 30 seconds.
5) Recognizing that satellite phones require a direct communication path to the satellite, would you be concerned about permanent call blocking if the satellite was fixed and was blocked by land-based objects (ex. mountains)?			Iridium's network of 66 satellites are continuously moving overhead every 10 minutes so if there is a land-based obstruction with the network, it is only temporary.
6) Do you have an interest in your satellite phone being capable of data communication for applications such as email?			Iridium provides Direct Internet and 3rd party software for PC and MAC dial-up networking access to email and Web with effective speeds up to 13kbps. For details, visit www.iridium.com/9555software
7) Do you have an interest in purchasing airtime on a prepaid basis?			Iridium offers global and regional prepaid and postpaid airtime packages that are available through Iridium service providers.
8) When using a satellite phone, would it be important to you to move around freely without having to orient the antenna in the direction of the satellite?			Iridium has the largest and closest network of 66 mobile satellites and installs omni-directional antennas on all of its satellite phones so all you have to do is simply point the Iridium satellite phone antenna up in order to connect and maintain a call.
